

ARADHANA MOHANTY

Aspiring DevOps / Cloud Engineer | AWS • Terraform • Kubernetes • CI/CD

+91 8260500680 | aradhanamohanty247@gmail.com | [linkedin.com/in/aradhana_mohanty](https://www.linkedin.com/in/aradhana_mohanty) | github.com/Aradhana-Mohanty2000
| [Portfolio](#)

PROFESSIONAL SUMMARY

Final-year MCA student specializing in Cloud Computing and Full Stack Development, with hands-on experience building and deploying CI/CD pipelines, containerized applications, and Infrastructure-as-Code on AWS. Completed an end-to-end GitOps pipeline on Amazon EKS integrating Jenkins, Docker, and ArgoCD with AWS networking services, along with multiple Terraform, Kubernetes, and ETL labs. Strong foundation in Linux administration, AWS cloud services, and troubleshooting, with a track record of self-driven, lab-based learning.

TECHNICAL SKILLS

Cloud (AWS): EC2, VPC, S3, IAM, Route 53, ACM, ELB/ALB, Amazon EKS, Lambda, SQS, Glue

Infrastructure-as-Code: Terraform (modules, EC2/VPC provisioning, S3/SQS/Lambda pipelines)

Containers & Orchestration: Docker, Kubernetes, Minikube, Amazon EKS, ArgoCD (GitOps), AWS Load Balancer Controller

CI/CD Pipelines & Config Management: Jenkins, GitHub Actions, Ansible, ECR

Version Control: Git, GitHub

Programming & Scripting: Python, JavaScript, HTML, CSS, PHP, C, Bash

Databases: MySQL, Oracle, MongoDB

Operating Systems: Linux administration, Windows

Other: AWS Azure (LAMP, VMSS, Load Balancer, SSL), REST APIs, JWT Auth, Troubleshooting

PROJECTS

End-to-End CI/CD GitOps Pipeline on AWS EKS | *Jenkins, Docker, ECR, Kubernetes (EKS), ArgoCD, Route 53, ACM, AWS Load Balancer Controller*

- Designed and deployed a full CI/CD GitOps pipeline on Amazon EKS, automating build, containerization, and deployment from source commit to production.
- Built a Jenkins pipeline to build Docker images and push them to Amazon ECR, triggering automated deployments via ArgoCD using the GitOps model.
- Configured a custom domain (xyzsit.xyz) with Route 53 and ACM for HTTPS, and used the AWS Load Balancer Controller to expose services through an Application Load Balancer on EKS.
- Documented infrastructure design and key lessons learned; tore down all AWS resources post-project to manage student account costs, keeping GitHub repos and domain ready for redeployment.

Terraform AWS Infrastructure Automation Labs | *Terraform, AWS EC2, VPC, S3, SQS, Lambda*

- Built modular Terraform configurations to provision EC2 instances and custom VPC networking on AWS.
- Automated an S3-to-Lambda-to-SQS event-driven pipeline using Terraform, provisioning all resources as code.
- Applied infrastructure best practices including .gitignore hygiene, t3.micro cost-optimized instance sizing, and secure key-pair (.pem) handling on WSL/Linux.

Kubernetes Local Cluster Deployment (Minikube) | *Docker Desktop, kubectl, Minikube, Windows 11*

- Set up a local Kubernetes development environment using Docker Desktop, kubectl, and Minikube on Windows via winget.
- Deployed and exposed a containerized application (myapp, kicbase/echo-server) using a NodePort service, and monitored cluster resources through the Kubernetes Dashboard.

AWS Glue ETL Pipelines | *AWS Glue, PySpark, Amazon S3*

- Developed PySpark-based Glue ETL jobs to copy and transform CSV data between S3 buckets.
- Troubleshooted and resolved job failures caused by malformed S3 paths and misconfigured job parameters, improving pipeline reliability.

Azure Full Stack Deployment Project | *Microsoft Azure, Linux (Ubuntu), Apache, MySQL, VMSS, Load Balancer, VNet/Subnets, SSL/HTTPS*

- Architected and deployed a multi-VM full stack web application on Azure with separate frontend and backend VMs, network-isolated via VNets and subnets, and a jump server for secure SSH access to private resources.
- Configured Azure Load Balancer to distribute incoming traffic across a Virtual Machine Scale Set (VMSS) with auto-scaling enabled on the frontend tier.
- Secured the deployment with HTTPS and SSL certificates (Certbot) on a custom domain, and enabled private, secure connectivity to backend and database VMs via the jump server.
- Documented the architecture end-to-end and decommissioned resources after successful validation of the load-balanced, HTTPS-secured setup, due to Azure student subscription credit limits.

Personal Portfolio Website | *React, Node.js, MongoDB Atlas, EmailJS, Vercel, Railway*

- Designed and deployed a personal portfolio site to showcase DevOps and full-stack projects, using MongoDB Atlas for data storage and EmailJS for contact-form delivery.

CERTIFICATIONS

- IBM Certified Deployment – Professional v5.2 (Security, Networking, Data Science 101) — July 2025
- GDG (Google Developer Group) Workshop — Data Science with Python (data handling & ML basics)

EDUCATION

Master in Computer Application (MCA) — Cloud Computing & Full Stack Development

Silicon University, Bhubaneswar, Odisha | 2024–2026 | CGPA: 8.09/10

Bachelor of Science (Technical & Professional)

BJB Autonomous College, Bhubaneswar, Odisha | 2021–2024 | CGPA: 8.95/10

INTERNSHIP

AWS Data Engineering and DevOps — Hands-on Training Program

May 25, 2026 – Present

- Completed intensive, lab-based training across AWS, Terraform, Jenkins, Docker, Kubernetes/EKS, Ansible, and CI/CD pipelines, with daily hands-on assignments and end-to-end project builds.

Full Stack Web App Deployment — Microsoft Azure

May 28, 2025 – Jul 5, 2025

- Deployed a full stack web application using LAMP stack (Linux, Apache, MySQL, PHP), VMSS, and Load Balancer configuration.
